TBM Racing Yamaha FZR/SHO/FX/VX Sponsons

\$499.95

We have re-designed our FZ/SHO/VX Rear Sponson blades specifically for the unique handling characteristics of the FZR hull design. The blades are a full 5 inches longer and 1 inch deeper than the previous design which was shared with the Kawasaki Ultra. This new design improves straight line tracking and has the most grip in the industry. The reliefs in the blade reduce friction and the tendency to hook in rough water conditions. There are 8 possible mounting positions to tune the handling for specific water conditions and personal preference. Our proven backing plate design reduces friction and increases grip by trapping an additional 1/2" of water between the hull and sponson blade giving incredible grip in the corners. Our backing plates are machined out of solid billet aluminum and whittled down to a mere 3 pounds making them the lightest on the market. Our new blades are also available separately if you have our previous design and would like to upgrade.
