TBM Kawasaki Ultra Fuel Pickup Optimizer

\$45.00

Our Kawasaki Ultra Fuel Pickup Optimizer is designed to reposition the fuel filter sock to get every last drop out of the OEM 20 gallon fuel tank. The stock position leaves almost 5 gallons of fuel in the bottom of the tank and fuel starvation will occur in hard turns with approximately 8 gallons of fuel remaining in the tank. With our Fuel Pick Up Optimizer you will gain about 25% more fuel mileage and minimize fuel starvation in the turns when the fuel level gets low. This product is an absolute must on any Ultra whether you're using it for recreation, closed course or offshore endurance competition.
