TBM Racing Yamaha Shortened Turn Plate

\$65.00

Designed for the aggressive racer, freestyler, or freerider our Yamaha Shortened Turn Plate positions the rider forward on the ski for more control and maneuverability. Our turn plate has two sets of handlebar mounting holes enabling the rider to choose between -1", or -1.5" from the stock location. Also we incorporated a slotted and lengthened linkage arm allowing the rider to make precise adjustments to the steering ratio. There is no need for a steering nozzle arm extension when using our shortened turn plate. Our shortened turn plate gives you a very aggressive steering ratio when using the added length of the linkage arm. Our Yamaha Shortened Turn Plate is compatible with our Sealed Bearing Steering System (P/N TBM126), or the UMI Steering System.
