TBM Racing Sea Doo RXP-X/RXT-X Tunable Super Scoop

\$209.95

It's been a long time coming but we feel it's never too little too late when we have an outstanding product design. Rather than rush a subpar scoop grate to market to pad our bank account we would rather take our time and develop the best product possible. This scoop grate will fit all year RXP-X and RXT-X through 2009. This Super Scoop will give you outstanding hook up and drive through the chop with a reasonable gain in top speed. We are seeing about 2mph over the stock grate however in the chop our grate keeps the pump loaded and driving forward. This was proven in the 2009 World Championships when our prototype Super Scoop won a world title above all of the Factory backed Yamaha FZR's. You have the option to tune the scoop for water conditions with the removable rear inlet wedge. With the wedge installed you gain the ultimate hook up and rough water handling while removed you pick up about .5mph and maintain good hook up and cornering.
