TBM Racing Kawasaki Ultra 300X Tunable Super Scoop

\$349.95

Introducing the ultimate scoop grate for your Kawasaki 300X using the same innovative technology proven on the 250X and 260X over the past five years. We worked in collaboration with Riva Racing to bring to market the most versatile fully tunable scoop grate that balances hook up, speed and cornering on the amazing Kawasaki powerhouse. This is the same scoop grate used to win the 2011 Martinique Cup piloted by Vincent Karam. There's an infinite amount of adjustment with 3 positions on the foil and a removable rear inlet chip that enables you to set up your craft for the conditions with a simple allen wrench. If conditions are really flat and you prefer all out speed the foil and chip can be removed for impressive top speeds. It's also important to note this is not just a modified version of our 260X grate as we completely redesigned the tooling to increase strength at the mounting points and withstand the additional hp of this craft.
