TBM Racing Super Scoop

\$299.95

Introducing the first intake grate designed exclusively for the SX-R 800. This is not another revised 750 SXI intake, it's designed to enhance the handling characteristics of the SX-R and correct its one inefficiency, which is keeping the pump hooked up in hard corners. The Super Scoop keeps the pump loaded when the ski is on edge as is the case in hard cornering. We also treat each intake with a corrosion resistant coating rather than the typical (cheaper) ball burnished finish that quickly corrodes when exposed to salt water. This is a true "race ready" part that doesn't require modification to the engine.
