Yamaha Super Jet Billet Driveline Coupler

\$99.95

Introducing our Yamaha Super Jet billet driveline coupler that is significantly lighter and stronger than any other coupler on the market. Our utilization of Solid Works stress analysis assures that our customers get the absolute best quality product that will hold up to the rigors of the high horsepower output of our racing engines. Our coupler has lightening holes that eliminate material where it is not needed for the structural integrity of the part. We designed our Yamaha coupler to accept a Kawasaki driveline damper which is smaller in diameter reducing unnecessary rotating weight and is more vibration absorbent. Uses Kawasaki O.E.M. damper.
