Kawasaki SX-R 800 Dual Cooling and Water Routing Kit

\$179.95

Our Dual Cooling and Water Routing Kit has long been a secret for only our sponsored racers. We have decided to release this to everyone and take the guess work out of your cooling system modifications. By using our cooling kit you will increase reliability and thoroughly cool the cylinder and exhaust reducing operating temperatures where it matters most while keeping cold water flowing to the pipe. You will also decrease under hood temperatures which translate to increased horsepower. Our kit includes all necessary hoses, clamps and fittings and an illustration of the proper routing.
