Kawasaki SXR 800 Total Loss Flywheel

\$650.00

Introducing our lightweight flywheel for the SX-R 800. Our flywheel is compatible with the stock ignition in '04 - '06 models and any aftermarket ignition system. Note: 2003 SX-R's require the use of an aftermarket ignition. The flywheel operates as a total loss system (does not recharge the battery), although with an Advent T3 ignition and a fresh battery you can ride for several days without the need to charge the battery. This is the lightest flywheel on the market saving over 3 pounds vs. the stock flywheel. Ideal for racing, freestyle and freeride our flywheel will give you amazing acceleration without jeopardizing reliability. Available with or without an Advent T3 ignition. Please specify the year of your SX-R when purchasing the ignition.
