## Hydrospace Sealed Bearing Steering System (Turn Plate Incl.)

\$260.00

We are proud to release our new Sealed Bearing Steering System and Turn Plate for the Hydrospace S4. We adapted our proven bearing design used on the Kawasaki/Yamaha/Polaris steering system to the S4 with a special adapter plate, steering system base and turn plate. The turn plate is designed to accommodate a V-Style bend handlebar rather than the original straight bar which positions you 1" rearward in the tray improving the handling significantly over stock. The rearward position compensates for the high rear handling characteristics of the Hydrospace S4. We also used our 40-428.55-519.79mm 10.00" Dg on an infinite amount of adjustment for personal preference.

Star Bars are required with this Steering System as the OEM bars will not work. \*includes the turn plate and handlebar clamps
