High Performance Ceramic Crankshaft Bearings - Kawasaki SX-R 800

\$230.00

Introducing the highest quality crankshaft bearing you can buy for your Kawasaki 800 SX-R. With the increased horsepower we are getting out of our Limited and Superstock engines the crankshaft bearings are the first part to fail. The stock bearing is adequate for the 80hp stock engine, although when we are exceeding 160hp on our Superstock engines we commonly have bearing failures. With over two years of testing we are very pleased with this bearing and also see a small increase in hp due to the reduced friction on the crankshaft. Great for a Limited engine as well and we consider it mandatory equipment on any TBM built Superstock engine. ****Sold Individually****
